

Several PhD-project openings in process control and process systems

Within the Delft Center for Systems and Control there are and there are going to be several options for PhD projects in the scope of (model-based) process control, process intensification, system identification and optimization in either industrial production processes or in reservoir engineering. Some of the projects are performed in closed cooperation with industrial partners. The PhD projects are all 4-year projects.

Potential candidates with an appropriate background in systems and control and affinity with process systems should contact and send their CV to Prof. Paul M.J. Van den Hof (p.m.j.vandenhof@tudelft.nl) or ir. Adrie Huesman (a.e.m.huesman@tudelft.nl).
